## **CLAIMS**

1. (Original) A system for combining multi-spectral images of a scene, the system comprising:

a channel for transmitting a scene image in a first spectral band;

a detector for sensing the scene in a second spectral band, the detector having an image output representative of the scene;

a display for receiving the image output and displaying a displayed image in the first spectral band;

a collimator for receiving and projecting the displayed image; and

a beam mixer for combining the transmitted scene in the first spectral band with the displayed image, and conveying the combined multi-spectral images to an output.

- 2. (Original) The system of Claim 1 wherein the first spectral band is visible light.
- 3. (Original) The system of Claim 1 wherein the second spectral band is in the infrared region.
- 4. (Original) The system of Claim 1 wherein the display is an active matrix display.
- 5. (Original) The system of Claim 1 further comprising a viewing system coupled to the output.
- 6. (Original) The system of Claim 1 wherein the representative output of the detector is an analog video signal.
- 7. (Original) The system of Claim 1 wherein the representative output of the detector is a digital video signal.
- 8. (Original) The system of Claim 5 wherein the viewing system is a night vision device.
- 9. (Original) The system of Claim 5 wherein the viewing system is a camera.

  25421366.1

10. (Original) The system of Claim 1 further comprising a data port for transmitting the scene image to a remote source.

- 11. (Original) The system of Claim 1 further comprising a data port for receiving information from a remote source or other modular instrument.
- 12. (Original) The system of Claim 1 further comprising a data port for receiving information from a remote source and wherein the display is adapted to receive and display data from the remote source.
- 13. (Original) The system of Claim 1 wherein the first and second spectral bands share a common aperture.
- 14. (Original) The system of Claim 1 wherein the first and second spectral bands have separate apertures.
- 15. (Original) The system of Claim 5 wherein the viewing system has an objective lens assembly and an image intensifier.
- 16. The system of Claim 5 wherein the viewing system has an objective lens assembly, and image intensifier and a viewing optics assembly.
- 17. (Original) A method for combining multi-spectral images of a scene, the method comprising:

receiving an image of the scene in a first spectral range at a detector; generating a video representation of the image; transmitting the video representation to a display; generating a visual representation of the image at the display; relaying the visual representation of the image; receiving the image of the scene in a second spectral range; combining the relayed image with the image in the second spectral range; transmitting the combined images to an output; and displaying the combined multi-spectral images of the scene.

18. (Original) The method of Claim 17 wherein the first spectral range is infrared.

3

19. (Original) The method of Claim 17 wherein the second spectral range is in the visible region.

- 20. (Original) The method of Claim 17 further comprising amplifying the combined images with an image intensifier system.
- 21. (Original) The method of Claim 17 further comprising transmitting the visual representation of the image to a data port.
- 22. (Original) The method of Claim 17 further comprising superimposing data on the combined multi-spectral images of the scene.
- 23. (Original) The method of Claim 17 wherein the relaying step comprises collimating the visual representation of the image.
- 24. (Original) The method of Claim 17 further comprising the step of processing the video representation of the image.
- 25. (Original) A method for combining multi-spectral images of a scene, the method comprising:

receiving an infrared (IR) image of a scene at an infrared detector;

generating a representation of the IR image;

transmitting the IR image representation to a display;

generating a visual representation of the IR image at the display;

collimating the displayed IR image;

combining the collimated IR image with an image of the scene in a second spectral region;

transmitting the combined images to an intensifier system operable to intensify images in the second spectral region; and

displaying the combined images of the scene.

26. (Original) The method of Claim 25 wherein the second spectral region is visible light.

25421366.1 4

27. (Original) The method of Claim 25 wherein intensifier system is a night vision goggle.

- 28. (Original) The method of Claim 25 wherein the IR image is received at a first aperture and the image of the scene in the second spectral region is received at a second aperture.
- 29. (Original) The method of Claim 25 wherein the visual representation of the IR image is displayed at an external viewer.
- 30. (Original) The method of Claim 25 further comprising transmitting the visual representation of the image to a data port.
- 31. (Original) The method of Claim 25 further comprising superimposing data on the combined multispectral images of the scene.
- 32. (Original) The method of Claim 25 further comprising processing the IR image representation.
- 33. (Original) A system for combining multi-spectral images of a scene, the system comprising:
- a viewing system for viewing the scene in a first spectral range, the viewing system having an objective lens and viewing optics;
- a detector for viewing the scene in a second spectral range, the detector having an image output representative of the viewed scene;
  - a display for receiving and displaying the image output;
  - a collimator for receiving and projecting the displayed image; and
- a beam mixer for receiving the viewed scene in the first spectral range and the displayed image and conveying both images to the viewing system to construct the combined multi-spectral images of the scene.
- 34. (Original) The system of Claim 33 wherein the viewing system further comprises an image intensifier.

25421366.1 5

35. (Original) The system of Claim 33 wherein the first spectral range is visible light.

- 36. (Original) The system of Claim 33 wherein the second spectral range is in the infrared band.
  - 37. (Original) The system of Claim 33 wherein the display is an active matrix.
- 38. (Original) The system of Claim 33 wherein the viewing system is a night vision device.
- 39. (Original) The system of Claim 33 wherein the representative output of the detector is an analog video signal.
- 40. (Original) The system of Claim 33 wherein the representative output of the detector is a digital video signal.
